June 10, 2026

Total Languages	12
Samples per Language	14,400
Total Samples	172,800
Scenario Categories	11
Audio Complete	Hindi (14,400 files)
Audio In Progress	English (3,670 / 14,400)

1. Per-Language Summary

Each language has 14,400 text samples stored in metadata CSV files. Audio generation is in progress - Hindi is complete and pushed to S3, English is partially done (25.5%), and the remaining 10 languages are pending TTS endpoint.

Language	Code	Samples	Audio Files	Audio Size	Status
Assamese	as	14,400	0	-	Pending
Bengali	bn	14,400	0	-	Pending
English	en	14,400	3,670	87.9 MB	25.5% done
Gujarati	gu	14,400	0	-	Pending
Hindi	hi	14,400	14,400	431.6 MB	Complete
Kannada	kn	14,400	0	-	Pending
Malayalam	ml	14,400	0	-	Pending
Marathi	mr	14,400	0	-	Pending
Odia	or	14,400	0	-	Pending
Punjabi	pa	14,400	0	-	Pending
Tamil	ta	14,400	0	-	Pending
Telugu	te	14,400	5	0.2 MB	Pending

S3 Upload Status

Language	Pushed to S3	Files
Hindi	Yes	14,400
English	Partial	3,670
Others	No	0

2. Scenario-wise Breakdown

All 12 languages share the same scenario distribution. The distribution is weighted to prioritize natural speech and code-mixing, which are the most common real-world patterns.

#	Scenario	Samples / Lang	% Share
1	normal_native_speech	2,880	20.0%
2	code_mixed_speech	2,160	15.0%
3	numeric_normalization	1,728	12.0%
4	abbreviations_acronyms	1,152	8.0%
5	spoken_number_patterns	1,152	8.0%
6	named_entities	1,152	8.0%
7	units_measurements	1,152	8.0%
8	english_word_retention	864	6.0%
9	language_script_consistency	720	5.0%
10	similar_language_confusion	720	5.0%
11	domain_specific_terms	432	3.0%
12	noisy_or_real_world_audio	288	2.0%
TOTAL		14,400	100%

3. Scenario Descriptions

normal_native_speech

Natural conversational speech in the native language without code-mixing or special patterns.

code_mixed_speech

Mixed language speech combining native language with English (e.g., Hindi-English, Telugu-English).

numeric_normalization

Numbers, dates, currency values, phone numbers, OTPs, and other numeric patterns.

abbreviations_acronyms

Common abbreviations and acronyms used in daily life (ATM, OTP, PAN, UPI, WiFi, etc.).

spoken_number_patterns

Spoken number patterns like 'double five', 'triple eight', digit-by-digit reading of sequences.

named_entities

Person names, place names, brand names, and other proper nouns in context.

units_measurements

Measurement units like kg, km/hr, degrees Celsius, mg, liters, etc. in natural sentences.

english_word_retention

English words that should remain in English within native language text (technical terms, brands).

language_script_consistency

Sentences designed to test that ASR output stays in the correct script for the language.

similar_language_confusion

Sentences that test distinguishing between similar languages (Hindi/Urdu, Bengali/Assamese).

domain_specific_terms

Medical, legal, financial, and technical terminology in natural conversational context.

noisy_or_real_world_audio

Sentences designed for noisy or real-world acoustic conditions (short phrases, ambient context).

4. CSV Schema

Each language has a metadata CSV file (metadata_{lang}.csv) with the following columns:

Column	Type	Description
id	String	Unique sample ID (e.g., hi_00001)
audio_path	String	Path to audio file or N/A if not generated
transcript	String	Raw spoken-form text as it would be spoken
normalized_transcript	String	Normalized clean text output for ASR
native_text	String	Text in native script of the language
romanized_text	String	Romanized transliteration of the text
code_mixed_text	String	Code-mixed variant with English words
scenario	String	Scenario category from the 11 types
language	String	ISO language code (hi, en, te, etc.)
duration_seconds	Float	Audio duration in seconds (0.0 if no audio)

5. Summary

Total Text Samples	172,800 (12 langs x 14,400)
Audio Generated	18,075 files (Hindi + partial English)
Audio Pending	154,725 files (10 languages + rest of English)
S3 Bucket	Hindi complete, English partial
Next Step	TTS endpoint for remaining languages
